

NEW
AND READY TO ROLL

Splitkote Light Stevia

Incotec proudly presents the new Stevia seed enhancement:

Splitkote Light Stevia, a seed pelleting and optional cleaning process. The pellet splits open when in contact with moisture allowing the seed free access to oxygen and water. The result is a more efficient crop production and a more reliable and predictable yield, professionalizing Stevia production.

Increased germination capacity

Enables precision sowing

No need for transplanting

Splitkote Light Stevia 2.5

Today's planting equipment requires a smooth round shape for optimal sowing results. Pelleting seeds creates that smooth surface and uniform shape as well as an increase in size and weight: all characteristics designed to maximize planting efficiency. A prior cleaning will maximize germination. The pellet splits open after sowing giving optimal conditions for quick development of the seedling.

Incotec has developed the optimal pellet for stevia seeds making efficient and professional production possible.

This new stevia seed enhancement is the first step in professionalizing stevia production, making plant raising more efficient, yield more reliable and giving more return on investment.
